

Project Design Phase

Solution Architecture

Date	11 February 2026
Team ID	LTVIP2026TMIDS56846
Project Name	Explore with AI: Custom Itineraries for Your Next Journey
Maximum Marks	2 Marks

Solution Architecture:

1. Overview

Explore with AI is a web and mobile-based platform that allows users to enter travel preferences (destination, duration, interests) and receive a personalized, AI-generated travel itinerary. The system is designed for simplicity, speed, and scalability.

2. High-Level Components

A. User Interface (Frontend)

- **Technology:** Streamlit (Python) or React.js for web/mobile interface
- **Functionality:**
 - Input fields for destination, trip duration, and preferences/interests
 - Submit button to generate itinerary
 - Display of AI-generated itinerary in a structured, day-wise format
 - Options to review, customize, or export itinerary (PDF/Text)
 - Display user-friendly error messages

B. API Layer / Backend

- **Technology:** Python (Flask/FastAPI)
- **Functionality:**

- o Receives user input from frontend
- o Validates inputs (destination, dates, preferences) o Handles requests to the AI model o Returns structured itinerary results to frontend

C. AI Engine

- **Technology:** Gemini Pro LLM / OpenAI GPT / other generative AI model
- **Functionality:**
 - o Processes input parameters (destination, duration, interests)
 - o Generates detailed day-wise itinerary including:
 - Attractions and sightseeing
 - Local dining recommendations
 - Suggested activities and timing
 - Travel tips and optional hidden gems
 - Ensures structured output for easy rendering on frontend

D. Data Layer (Optional)

- **Technology:** Cloud database (MongoDB/PostgreSQL)
- **Functionality:**
 - o Stores predefined destination data (optional) o Stores user-generated itineraries (if history/export feature is implemented) o Logs analytics for system monitoring

E. Export & Reporting Module

- **Functionality:**
 - o Convert itinerary to PDF or downloadable formats o Copy/export to clipboard
 - o Optional integration with email or messaging for sharing

3. Key Features of Architecture

- **Modular Design:** Frontend, backend, AI engine, and data layer are loosely coupled.
- **Scalable:** Can handle more destinations, multiple users, and AI requests simultaneously.
- **Extensible:** Future features can include multi-destination planning, travel booking integrations, or content generation for blogs.
- **Simple Workflow:** Focused on input → AI processing → output, minimizing user friction.
